PREFACE

I have taught CIS 221, *Digital Logic*, for Cochise College since about 2003 and enjoy working with students on this topic. From the start, I wanted students to work with labs as part of our studies and actually design circuits to complement our theoretical instruction. As I evaluated circuit design software I had three criteria:

- **Open Educational Resource (OER).** It is important to me that students use software that is available free of charge and is supported by the entire web community.
- **Platform.** While most of my students use a Windows-based system, some use Macintosh and it was important to me to use software that is available for both of those platforms. As a bonus, most OER software is also available for the Linux system, though I'm not aware of any of my students who are using Linux.
- **Simplicity.** I wanted to use software that was easy to master so students could spend their time understanding digital logic rather than learning the arcane structures of a simulation language.

I originally wrote a number of lab exercises using *Logisim*, but the creator of that software, Carl Burch, announced that he would quit developing it in 2014. Because it was published as an open source project, a group of Swiss institutes started with the *Logisim* software and developed a new version that integrated several new tools, like a chronogram, and released it under the name *Logisim-Evolution*.

It is my hope that students will find these labs instructive and they will enhance their learning of digital logic. This lab manual is written with \LaTeX and published under a [Creative Commons Zero](#) license with a goal that other instructors can modify it to meet their own needs. The source code can be found at [my personal GITHUB page](#) and I always welcome comments that will help me improve this manual.

—George Self

Part I

INTRODUCTION TO LOGISIM-EVOLUTION

LOGISIM-EVOLUTION is used to create and test simulations of digital circuits. This part of the lab manual includes only one lab designed to introduce *Logisim-evolution* and teach the fundamentals of using this application.

Part II

FOUNDATIONS

FOUNDATIONAL EXERCISES are designed to provide practice with simple logic circuits in order to both develop skill with *Logisim-evolution* and illustrate the foundations of digital logic.

Part III

COMBINATIONAL CIRCUITS

COMBINATIONAL LOGIC is the bedrock for all digital logic circuits. A combinational circuit's output is determined only by the status of the various inputs and an external clock signal is not necessary as in sequential circuits. All of the circuits completed so far in this manual have been combinational and the two labs in this part of the manual are designed to further develop the concepts of combinational digital logic with two relatively complex examples.

Part IV

SEQUENTIAL CIRCUITS

SEQUENTIAL LOGIC circuits develop the concepts of clock-driven logic while creating several practical counters and memory circuits. These labs also introduce the *Logisim-evolution Chronogram*, which builds timing diagrams for sequential logic circuits.

Part V

SIMULATION

SIMULATION is the most complex topic covered in this lab manual. Included in this manual are a simple processor, designed to teach the foundations of a Central Processing Unit, and an elevator simulator, designed to be a capstone project.

ELEVATOR

1.1 PURPOSE

This final lab is used as a capstone digital logic project.

1.2 CHALLENGE

For this lab, build a circuit that simulates an elevator. This lab does not include step-by-step directions; instead, this document only specifies the requirement and students are on their own to design and build the circuit.

Here are the specifications:

1. The elevator should be in a 3-story building and stop on each floor.
2. There should be a call button on each floor so a guest can request the elevator. When a guest presses the call button, if the elevator is not busy, then it should proceed to the requested floor. If the elevator is busy, it should return to the called floor as soon as it finishes the current trip.
3. The elevator car must have a button for each floor (for this lab, ignore buttons like “Open Door”). When one of the buttons is pressed, the elevator will move to the requested floor. If the elevator is already on the requested floor (for example, some guest on the second floor presses the “Floor 2” button), then the elevator will do nothing.
4. The simulator must have some way to indicate where the elevator is located (its current floor). That could be done with a numeric display (a 7-segment display) or with some sort of light system (an LED on each floor that will light up when the elevator is present). There may be other ways to indicate the elevator’s location, so creativity is encouraged.
5. The simulator must have some way to indicate the “door open” and “door close” process. For example, a row of LEDs could light in sequence to show the door opening and a few seconds later closing again.

Figure 1.1 is one student’s concept from an earlier class.

Figure 1.1: Example Elevator Simulator

1.3 DELIVERABLE

To receive a grade for this lab, complete the elevator simulator. Be sure the standard identifying information is at the top left of the **main** circuit:

Save the file with this name: *Lab12_elevator* and submit that file for grading.

Part VI

APPENDIX

TTL REFERENCE

Logisim-Evolution includes a number of Transistor-Transistor Logic (TTL) Integrated Circuits (ICs). These are pre-packaged digital logic circuits that perform specific, well-defined functions. There are, literally, hundreds of TTL ICs available for purchase from electronics warehouses but *Logisim-Evolution* includes only 35 of the most commonly-used devices. Figure A.1 shows three surface-mounted ICs on a circuit board.

Figure A.1: Three Surface-Mounted Integrated Circuits

A.1 7400: QUAD 2-INPUT NAND GATE

This device contains four independent 2-input NAND gates. Figure A.2 is a logic diagram of one of the four circuits.

Figure A.2: 7400: Single NAND Gate Circuit

The 7400 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.1.

A.7 7413: DUAL 4-INPUT NAND GATE (SCHMITT-TRIGGER)

This device contains two independent 4-input NAND gates. Schmitt-triggers are a special type of device that are used to filter out spurious noise on a circuit. They are designed to change from low-to-high or high-to-low only when the input voltage reaches a preset level but not if the voltage randomly fluctuates without crossing the set-points. This device is essentially the same as the 7418. Figure A.8 is a logic diagram of one of the two circuits.

Figure A.8: 7413: Single 4-Input NAND Gate Circuit

The 7413 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.7.

Input: 13	In 4B

Table A.16: Pinout For 7432

A.17 7436: QUAD 2-INPUT NOR GATE

This device contains four independent 2-input NOR gates. This device is essentially the same as the 7402. Figure A.18 is a logic diagram of one of the four circuits.

Figure A.18: 7436: Single NOR Gate Circuit

The 7436 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.17.

Logisim Label	Function
Input: 1	In 1A
Input: 2	In 1B
Output: 3	Out 1Y
Input: 4	In 2A
Input: 5	In 2B
Output: 6	Out 2Y
Output: 8	Out 3Y
Input: 9	In 3A
Input: 10	In 3B
Output: 11	Out 4Y
Input: 12	In 4A
Input: 13	In 4B

Table A.17: Pinout For 7436

A.18 7442: BCD TO DECIMAL DECODER

This device takes a BCD input and deactivates a single line corresponding to the input number. It is often called a “One-Of-Ten” decoder. As an example, if 0111_{BCD} is input then line 7-of-10 will go low while all other outputs will remain high. Figure A.19 illustrates a 7442 IC in a very simple circuit.

Figure A.19: 7442: BCD to Decimal Decoder

Table A.18 is the truth table for this device. Any BCD input greater than 1001 is ignored and all outputs will be high for those inputs.

Inputs				Output									
A	B	C	D	0	1	2	3	4	5	6	7	8	9
0	0	0	0	0	1	1	1	1	1	1	1	1	1
0	0	0	1	1	0	1	1	1	1	1	1	1	1
0	0	1	0	1	1	0	1	1	1	1	1	1	1
0	0	1	1	1	1	1	0	1	1	1	1	1	1
0	1	0	0	1	1	1	1	0	1	1	1	1	1

Input 14: B	In B
Input 15: A	In A

Table A.19: Pinout For 7442

A.19 7443: EXCESS-3 TO DECIMAL DECODER

This device takes an Excess-3 input and deactivates a single line corresponding to the input number. It is often called a “One-Of-Ten”

decoder. As an example, if 0011_{Ex3} is input then line 0-of-10 will go low while all other outputs will remain high. This is wired in exactly the same way as the 7442 IC illustrated in Figure A.19.

Table A.20 is the truth table for this device. Any input numbers other than those found in the truth table are ignored and all outputs will be high for those inputs.

Inputs				Output									
A	B	C	D	0	1	2	3	4	5	6	7	8	9
0	0	1	1	0	1	1	1	1	1	1	1	1	1
0	1	0	0	1	0	1	1	1	1	1	1	1	1

Input 13: C	In C
Input 14: B	In B
Input 15: A	In A

Table A.21: Pinout For 7443

A.20 7444: GRAY TO DECIMAL DECODER

This device takes a Gray Excess Code, which is a combination of Gray and Excess-3 Codes, input and deactivates a single line corresponding to the input number. It is often called a “One-Of-Ten” decoder. As an example, if 1100_{GrayEx3} is input then line 5-of-10 will go low while all other outputs will remain high. This is wired in exactly the same way as the 7442 IC illustrated in Figure A.19.

Table A.22 is the truth table for this device. Any input numbers other than those found in the truth table are ignored and all outputs will be high for those inputs.

Inputs				Output									
A	B	C	D	0	1	2	3	4	5	6	7	8	9
0	0	1	0	0	1	1	1	1	1	1	1	1	1

Input 11: CLK2	FF2 clock
Input 12: D2	FF2 data input
Input 13: nCLR2	On low, clear FF2

Table A.30: Pinout For 7474

A.27 7485: 4-BIT MAGNITUDE COMPARATOR

This device compares two 4-bit numbers and outputs one of three values: $A > B$, $A = B$, or $A < B$. It is also designed to be cascaded by including an input port for each of the three values. The 7485 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.31.

Logisim Label	Function
Input 1: B3	Bit B3
Input 2: A<B	Value from prior stage
Input 3: A=B	Value from prior stage
Input 4: A>B	Value from prior stage
Output 5: A>B	High if $A > B$
Output 6: A=B	High if $A = B$
Output 7: A<B	High if $A < B$
Input 9: B0	Bit B0
Input 10: A0	Bit A0
Input 11: B1	Bit B1
Input 12: A1	Bit A1
Input 13: A2	Bit A2
Input 14: B2	Bit B2
Input 15: A3	Bit A3

Input: 12	In 4
Input: 13	nEna 4

Table A.33: Pinout For 74125

A.30 74165: 8-BIT PARALLEL-TO-SERIAL SHIFT REGISTER

This device can accept data in either parallel or serial form and shift it out in serial form. The 74165 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.34.

Logisim Label	Function
Input 1: Shift/Load	Load when low, shift when high
Input 2: Clock	Clock
Input 3: P4	Input bit 4
Input 4: P5	Input bit 5
Input 5: P6	Input bit 6
Input 6: P7	Input bit 7
Output 7: Q7n	Complement of serial out
Output 9: Q7	Serial out
Input 10: Serial Input	Serial data in
Input 11: P0	Input bit 0
Input 12: P1	Input bit 1
Input 13: P2	Input bit 2
Input 14: P3	Input bit 3
Input 15: Clock Inhibit	Clock inhibit

Table A.34: Pinout For 74165

A.31 74175: QUAD D-FLIPFLOPS WITH SYNC RESET

This device contains four D-Flipflops with a single clock and master reset. The 74175 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.35.

Logisim Label	Function
Input 1: nCLR	On low, clear all FF
Output 2: Q1	FF1 Q-out
Output 3: nQ1	FF1 Q-not-out
Input 4: D1	FF1 data input
Input 5: D2	FF2 data input
Output 6: nQ2	FF2 Q-not-out
Output 7: Q2	FF2 Q-out
Input 9: CLK	Clock for all FF
Output 10: Q3	FF3 Q-out
Output 11: nQ3	FF3 Q-not-out
Input 12: D3	FF3 data input
Input 13: D4	FF4 data input
Output 14: nQ4	FF4 Q-not-out
Output 15: Q4	FF4 Q-out

Table A.35: Pinout For 74175

A.32 74266: QUAD 2-INPUT XNOR GATE

This device contains four independent 2-input XNOR gates. Figure A.27 is a logic diagram of one of the four circuits.

Figure A.27: 74266: Single XNOR Gate Circuit

The 74266 device in *Logisim-Evolution* uses the wiring connections indicated in Table A.36.

Logisim Label	Function
Input: 1	In 1A
Input: 2	In 1B
Output: 3	Out 1Y
Input: 4	In 2A
Input: 5	In 2B
Output: 6	Out 2Y
Output: 8	Out 3Y

A.33 74273: OCTAL D-FLIPFLOP WITH CLEAR

This device contains a single 8-bit D-Flipflop with a single clock and master clear. The 74273 device in *Logisim-Evolution* uses the wiring connections indicated in Table [A.37](#).

Logisim Label	Function
Input 1: nCLR	On low, clear the FF
Output 2: Q1	data bit 1 output
Input 3: D1	data bit 1 input
Input 4: D2	data bit 2 input
Output 5: Q2	data bit 2 output
Output 6: Q3	data bit 3 output
Input 7: D3	data bit 3 input
Input 8: D4	data bit 4 input
Output 9: Q4	data bit 4 output
Input 11: CLK	Clock
Output 12: Q5	data bit 5 output
Input 13: D5	data bit 5 input
Input 14: D6	data bit 6 input
Output 15: Q6	data bit 6 output
Output 16: Q7	data bit 7 output
Input 17: D7	data bit 7 input
Input 18: D8	data bit 8 input
Output 19: Q8	data bit 8 output

Table A.37: Pinout For 74273

A.34 74283: 4-BIT BINARY FULL ADDER

This device contains a 4-bit adder with carry-in and carry-out bits. The 74283 device in *Logisim-Evolution* uses the wiring connections indicated in Table [A.38](#).

Logisim Label	Function
Output 1: $\sum 2$	Sum, bit 2
Input 2: B2	Operand B, bit 2
Input 3: A2	Operand A, bit 2
Output 4: $\sum 1$	Sum, bit 1
Input 5: A1	Operand A, bit 1
Input 6: B1	Operand B, bit 1
Input 7: CIN	Carry in bit
Output 9: C4	Carry out bit
Output 10: $\sum 4$	Sum, bit 4
Input 11: B4	Operand B, bit 4
Input 12: A4	Operand A, bit 4
Output 13: $\sum 3$	Sum, bit 3
Input 14: A3	Operand A, bit 3
Input 15: B3	Operand B, bit 3

Table A.38: Pinout For 74283

A.35 74377: OCTAL D-FLIPFLOP WITH ENABLE

This device contains a single 8-bit D-Flipflop with a single clock and enable. The 74377 device in *Logisim-Evolution* uses the wiring connections indicated in Table [A.39](#).

Logisim Label	Function
Input 1: nCLKen	On low, enable the clock
Output 2: Q1	data bit 1 output
Input 3: D1	data bit 1 input
Input 4: D2	data bit 2 input
Output 5: Q2	data bit 2 output
Output 6: Q3	data bit 3 output
Input 7: D3	data bit 3 input
Input 8: D4	data bit 4 input
Output 9: Q4	data bit 4 output
Input 11: CLK	Clock
Output 12: Q5	data bit 5 output
Input 13: D5	data bit 5 input
Input 14: D6	data bit 6 input
Output 15: Q6	data bit 6 output
Output 16: Q7	data bit 7 output
Input 17: D7	data bit 7 input
Input 18: D8	data bit 8 input
Output 19: Q8	data bit 8 output

COLOPHON

This book was typeset using the typographical look-and-feel classicthesis developed by André Miede. The style was inspired by Robert Bringhurst's seminal book on typography "*The Elements of Typographic Style*". classicthesis is available for both L^AT_EX and L^yX:

<https://bitbucket.org/amiede/classicthesis/>

Happy users of classicthesis usually send a real postcard to the author, a collection of postcards received so far is featured here:

<http://postcards.miede.de/>

Final Version as of August 18, 2019 (classicthesis Edition 4.0).

Hermann Zapf's *Palatino* and *Euler* type faces (Type 1 PostScript fonts *URW Palladio L* and *FPL*) are used. The "typewriter" text is typeset in *Bera Mono*, originally developed by Bitstream, Inc. as "Bitstream Vera". (Type 1 PostScript fonts were made available by Malte Rosenau and Ulrich Dirr.)
